

Firewall: Is there a way to add a site to the Ban List for incoming connections only ?

I need to block a server from scanning my network, but I still need to be able to connect to it.

Add these firewall rules in your rc_user script:

```
ipfwadm -I -i deny -P tcp -W ppp0 -S 1.2.3.4  
ipfwadm -I -i deny -P icmp -W ppp0 -S 1.2.3.4
```

replace 1.2.3.4 with the ip address you want to block and ppp0 with your external interface (ppp0 is for dialup, for ethernet routers usually eth0).
