

## *Networking: Multiple external IP addresses?*

Q: I have 5 static IP addresses from my ISP, will this support those 5 separate IP addresses and allow me to NAT all of them separately?

A: No, although FREESCO has support for IP aliases on a single interface (see f.i. [this article](#) in the FREESCO DokuWiki), it does not play well together with NAT.

FREESCO is designed to share a single internet connection (modem, ADSL, cable) with multiple local networks.
