

## *Printing: How do I setup a Win2K client to use the FREESCO print server?*

First enable the print server on your FREESCO if not done so already:

1. run setup
2. choose option a) Advanced
3. choose option 'Print Server'
4. at question 'Enable Print Server(s) y/s/n' select 's' for secure
5. choose the default for the rest of the questions.
6. save new config and reboot

Oh yeah, don't forget to connect a printer to the LPT1 port ;)

Then check out this [howto](#) or download the attached file.
