

Generic: kernel: EXT2-fs warning: checktime reached, running e2fsck is recommended

This warning will eventually popup in your log @ boot time. But 'e2fsck' is not a stock issue on FREESCO. Why not?

The FREESCO ramdisk is using so called ext2 file system. Every ext2 file system has a checktime build in. This is usefull when the ext2 is build on a harddisk or floppy but not when it's about a ramdisk.

You can therefore safely ignore this message (unless of course it's about another ext2 file system on your system).

The **e2fsprogs** package (available for both 027 and 03x) can be used to create and maintain ext2 file systems.

I believe the later 0.3.x FREESCO releases are shipped with a ramdisk without the ext2 checktime, so there the warning will not show.
