

Generic: What are the requirements for FREESCO?

- 386sx (486 or newer recommended)
- RAM - 8Mb minimum
- FDD - 1.44Mb
- HDD - optional, but recommended for large package installs and add-ons
- modem - optional, hardware controlled, winmodems are **not** supported
- one or more network card(s)
- (some TCP/IP networking knowledge is helpful)

The above mentioned specs are the absolute minimum specifications. If you plan to run f.i. the Apache web server with a PHP/mySQL driven web site on your FREESCO then the next configuration is recommended:

- Pentium 150Mhz or better
- RAM 32 Mb or better
- 1Gb HDD or better

Unique solution ID: #1112
