

Generic: Howto back up harddrive configuration to floppy disk ?

Wit all versions, Freesco has a 'backup' command which you can use when installed on a hard drive will copy all the configuration files back to a floppy disk version of freesco to bring it up to date.

That disk is then a live backup which can be used either as an emergency boot disk to stand in for the hard drive, or to reinstall the hard drive with the "move2hdd" command.
